

DO YOU KNOW?

Infants and unborn babies can have a stroke.

Perinatal stroke usually occurs between the middle of pregnancy and delivery.

## **WARNING SIGNS & SYMPTOMS**

#### **NEWBORNS**

- Seizures (repetitive twitching of face, arm or leg)
- Apnea (pause in breathing) associated with staring
- Lethargy, poor feeding

#### WHAT TO DO:

Alert medical team/emergency services for possible signs of stroke.

#### **DEVELOPING BABIES**

- Decreased movement or weakness on one side of the body
- Hand preference before age 1
- Developmental delays

#### WHAT TO DO:

Consult with your child's health care team, which may include a pediatric neurologist. An MRI of the brain is usually required.

### IF IT LOOKS OR FEELS LIKE A STROKE, IT MAY BE ONE.

#### **RISK FACTORS**

The cause in most perinatal strokes remains unknown.

Some factors that could lead to stroke include:

Congenital heart disease

Disorders of the placenta

Acute blood-clotting disorders

Infections

# FACTS TO KNOW

- About 1% of children with perinatal stroke will have more strokes.
- Recurrence in future pregnancies is **rare** (<1%).
- In one study, perinatal stroke affected about one in 3,500 live births.
- About 65% of children with perinatal stroke
  will have permanent neurological deficits.
  These may include one-sided weakness, epilepsy, speech
  and language difficulties, visual impairments, learning and
  memory problems and behavior changes.
